

IRIS Carbon is a collaborative cloud based platform to create documents in XBRL and other formats for submission to regulators.

Key Features

Real Time Collaboration

Allows multiple users to collaborate on a document at the same time.

Audit Check

Allows external auditors access to company reports, to comment and suggest changes, all in one seamless platform.

Smart Editing

Features like Editing, Review and Comment make finalization process with approvals and sign offs easier.

Rich Data Linking

Updating all linked data becomes as easy as making the change at one point.

Single Source. Multiple Formats

Create outputs in multiple formats (including XBRL and PDF) from a single source document.

Roll Forward Filing

Prepare the documentation only once and update it easily for the next filing.

Why IRIS CARBON

Improve Workflow

The document owner can exercise total control by sharing full or part of the document with external parties such as XBRL experts or auditors when required. Since all processes are visible on screen, in one place, work is less error prone. It provides a clear, current view of the document from start to finish.

Increase Productivity

IRIS Carbon is designed to not only make the first creation and submission of documents easier, but it is loaded with features like Roll Forward which facilitate simpler successive filings.

There's More...

Reliable High-Quality Service

IRIS Carbon comes with the service backing of a company that has perhaps the largest number of XBRL professionals in the world, their work spread across 15 countries, and a record of working with over 12000 complex documents in the US & UK alone.

Custom Branding

Accounting firms and Partners can white label IRIS Carbon as their own to their clients.
